Message from the Guest Editor

Dear Colleagues,

This Special Issue focuses on the roles of technological advancements and managerial risks to support economic growth. In this research context, the Special Issue is accommodating novel research approaches on the various types of risk that impact economic growth, either at micro- or macroeconomic levels of analysis. Under this pluralistic approach, this Special Issue covers all multileveled types of risk in market, credit, microfinancing, operational, strategic, liquidity, regulatory, reputational, and innovative, which all determine economic growth in different organizational or national contexts of prosperity. Research objectives should be private-owned SMEs, public-directed organizations, and developed and fast emerging developing economies worldwide. The level of defining moderating risks and pursuing innovation and profitability at each one of these micro-, meso-, and macroscales of analysis remains an especially intrinsic and challenging issue.

If your research interests are related to the topics above, I would be more than happy to accommodate your research works in this Special Issue.
