**30 June 2022**

### Message from the Guest Editors

Dear Colleagues,

In recent years, the rapid technological evolution and the emerging scaling up of technologies for energy production have become determinant factors in the development of national, European, and international law.

In this Special Issue of *Laws*, original research articles, reviews, and follow-up studies of contemporary topical, national, and international law are welcome, where research areas may include (but are not limited to) the following dimensions: (1) from the European Union and international contexts and the accompanying regulations regarding diffusion of renewables-based technologies in both energy markets and industrial or manufacturing sectors; (2) from the side of countries (global coverage) that are looking at the interrelation of international, EU, and national legislations on energy and its marketing routes; (3) from the side of manufacturing companies or commercial SMEs on extroversion and internationalization orientation that are characterized by the rapid shift from conventional technologies toward smart, innovative, and flexible modes of energy production.

We warmly look forward to receiving your contributions.
